Application Guidebook for Foreign Students Graduate School of Medical Sciences (Doctor of Philosophy Degree Program) Nagoya City University for Academic Year 2026 (April Enrollment)

Admission examination will be held in August 2025 and January 2026.

Admission policy of Graduate School of Nagoya City University

Nagoya City University (NCU) aims to be a university in which all citizens feel pride and affinity. In graduate education, based on recognition that research guidance, for graduate students is a challenge in offering research activities; We aim to cultivate researchers and professionals who can gain advanced expertise and an interdisciplinary thinking.

With this philosophy and aim, the graduate school is widely looking for individuals who possess advanced expertise and an eagerness and aptitude for activity both within Japan and abroad, in addition to diverse skills and work experience.

[Doctor of Philosophy Degree Program in Graduate School of Medical Sciences of NCU] (Desirable Students)

• Individuals who aspire to be an international medical researcher capable of leading medical research in future

•Individuals who intend to be a medical professional capable of establishing and practicing the most advanced medical care

《Content and level of knowledge that applicants should have been acquired》

In addition to sufficient English proficiency to understand and write papers in English, in order to perform research in medicine/life sciences, applicants are to have knowledge of life sciences and/or of basic medicine at a level of those who have completed a Master's degree program, or applicants are to have basic medical treatment technique, knowledge and experience in the clinical practice necessary to receive training on the most advanced medical care.

Major	No. of	Major	No. of Enrollment
	Enrollment		
Structure and Function in Biomedical Sciences	32	Biodefense System and Comprehensive Medical Sciences	32
Biosignaling and Regulation in Medical Sciences	28	Community Medicine, Environmental Health Sciences and Medical Education	8

1. Prescribed enrollments (Total of April and October enrollment)

Note 1:Prior to submitting application materials to NCU, please contact the faculty member whom you would like to have as a supervisor, and consult him/her about your application.

Note 2:Some programs may require a medical license depending on your research theme. Consult with faculty member in advance, whom you would like to have as a supervisor.

2. Eligibility of applicants

All applicants must satisfy at least one of the following conditions:

(1) A person who has completed a program in medicine, dentistry, pharmacy or veterinary medicine (limited to 6 years for pharmacy and veterinary medicine) and graduated from university or is expected to graduate from university by March, 2026.

Contact details: Administration officer, Administration Office, Graduate School of Medical Sciences, Nagoya City University E-mail : med-daigakuin@sec.nagoya-cu.ac.jp *Inquiries must be made by e-mail*.

- (2) A person who has completed an18-year program (limited to programs including a course in medicine, dentistry, pharmacy or veterinary medicine) in school education in a foreign country or is expected to complete such a program by March, 2026.
- (3) A person who has completed an 18-year program (limited to programs including a course in medicine, dentistry, pharmacy or veterinary medicine) in school education in a foreign country by completing in Japan the same program of correspondence education provided by the foreign country or is expected to complete such a program by March, 2026.
- (4) A person who has completed or is expected to complete by March, 2026 an 18-year program (only limited programs including a course in medicine, dentistry, pharmacy or veterinary medicine) of the foreign educational institution established in Japan based on the educational system of this foreign country. In such cases, the institution should be specified by the Minister of Education, Culture, Sports Sciences and Technology of Japan.
- (5) A person who has completed or is expected to complete by March, 2026 a 5-year or more year's program in the university or other tertiary institution in a foreign country assured by the government or authorized organization in the original country, or specified by the Ministry of Education, Culture, Sports, Science and Technology of Japan. The program includes the comprehensive education study provided by the foreign university in tertiary institution in Japan, or the program provided by the foreign educational institution in Japan based on the educational system of the original country. In such cases, the institution should be specified by the Ministry of Education, Culture, Sports, Science and Technology of Japan.
- (6) A person who has been designated by the Minister of Education, Culture, Sports, Science and Technology of Japan
 - a. A person who has graduated from National Defense Medical College established under the Ministry of Defense Establishment Law (Law No. 164, 1954) or is expected to graduate from said college by March, 2026.
 - b. A person who has completed a master's program or is qualified to be awarded the master's degree by March, 2026.
 - c. A person who been enrolled in a doctoral program (not divided into 2 segments: first 2-year for master's course and second 3-year for doctor's course) for 2 years or more, acquired 30 or more credits, received necessary research guidance, and is determined by the Graduate School of Medical Sciences to have an academic ability equivalent to or better than those who have completed a program of medicine, dentistry, pharmacy or veterinary medicine at university.
 - d. A person who has graduated from university (excluding a course in medicine, dentistry, pharmacy or veterinary medicine) or completed a 16-year program of school education in a foreign country, subsequently been engaged in research for 2 years or more at a university, research institute or the like, and is determined by the Graduate School of Medical Sciences from their achievements in such research to have an academic ability equivalent to or better than those who have completed a program of medicine, dentistry, pharmacy or veterinary medicine at university.
- (7) A person who has been enrolled in university (only limited a course in medicine, dentistry, pharmacy or veterinary medicine) for 4 years or more, or completed a 16-year program (only limited programs including a course in medicine, dentistry, pharmacy or veterinary medicine) in school education in a foreign country, and is determined by the Graduate School of Medical Sciences to have acquired the prescribed credits with excellent academic results.
- (8) A person who has determined by the Graduate School of Medical Sciences to have academic ability equivalent to or better than that those defined in (1) and will be 24 years old by March 31, 2026.
- **3.** Screening of Qualification for the examination under Category (6)c, d (7) or (8) as described above
- (1) Application period for "Screening of Qualification for the examination"

First exam: June 18 (Wed) – June 25 (Wed), 2025 *must be reached at the end of period. Second exam: November 4 (Tue) – November 11 (Tue), 2025 *must be reached at the end of period.

(2) Application documents

Applicants who fall under Category (6) c, d (7) or (8) must write in red "application qualification documents, Graduate School of Medical Sciences, Doctor of Philosophy Degree Program (April Enrollment)" on the envelope and send the following documents by registered express post to the address of NCU in page3.

•Applicants who fall under Category (6) c

- (1) Request for Screening of Eligibility for Examination (prescribed form of "D-5")
- (2) Resumé (prescribed form of "D-2")
- (3) Academic Transcript
- (4) Certificate of enrollment (or expected enrollment) for at least 2 years

·Applicants who fall under Category (6) d

- (1) Request for Screening of Eligibility for Examination (prescribed form of "D-5")
- (2) Resumé (prescribed form of "D-2")
- (3) Diploma
- (4) Academic Transcript
- (5) Certificate of Engagement in Research
- (6) Achievement Records (prescribed form of "D-6")

• Applicants who fall under Category (7): A person who has been enrolled in university (limited to c a course in medicine, dentistry, pharmacy or veterinary medicine) for 4 years.

- (1) Request for Screening of Eligibility for Examination (prescribed form of "D-5")
- (2) Resumé (prescribed form of "D-2")
- (3) Academic Transcript
- (4) Course Curriculum
- (5) Syllabus of the university
- Applicants who fall under Category (7): A person who completed a 16-year program (only limited programs including a course in medicine, dentistry, pharmacy or veterinary medicine) in school education in a foreign country.
- (1) Request for Screening of Eligibility for Examination (prescribed form of "D-5")
- (2) Resumé (prescribed form of "D-2")
- (3) Diploma
- (4) Academic Transcript
- Applicants who fall under Category (8): A person who has been completed a 16-year program (limited to programs including a course in medicine, dentistry, pharmacy or veterinary medicine) in school education in a foreign country.
- (1) Request for Screening of Eligibility for Examination (prescribed form of "D-5")
- (2) Resumé (prescribed form of "D-2")
- (3) Diploma of schools after junior high school (senior high school, junior college, other school) if you have graduated from such school.
- (4) Achievement Records (prescribed form of "D-6")
- Note1: If you would like to apply from overseas, please make sure to entrust your application procedure to the proxy residing in Japan. Application directly from overseas will not be accepted. Notifications from NCU will be sent to your proxy's address.
- Note2: Some documents such as "Certificate of Completion", "Diploma", "Academic Transcript" and "Certificate of Engagement in Research" must be written in Japanese or English, or the translated documents in either of these languages should be attached.
- Note3: Applicants who have already submitted the documents required for application at the time of screening of qualification are not required to submit them again at the time of application.
- Note4: Photocopies are acceptable for diplomas, transcripts, etc. issued by foreign institutions of higher education that cannot be reissued. If a photocopy is submitted, the original will be verified at the time of admission procedures.
- Note5: D-2, D-5 and D-6 forms can be downloaded from the following website. URL https://www.nagoya-cu.ac.jp/english/faculty/admissions/med/index.html

Send application document by registered express post to:

Student Affairs Division, Admission Office, Nagoya City University 1 Kawasumi, Mizuho-cho, Mizuho-ku, Nagoya, Aichi 467-8601, Japan (3) Results of the screening

The results of the screening will be notified to applicants as early as possible. Applicants who passed the screening can apply to the examination.

4. Period of application

(1) Period of application

First exam: July 11 (Fri) – July 18 (Fri), 2025 *must be reached at the end of period.

Second exam: November 27 (Thu) – December 4 (Thu), 2025 *must be reached at the end of period.

- (2) Application procedures
- a. Enclose the application documents, etc. into the A4 sized envelope, stick NCU designated address label which should be filled in the details and send them by registered express mail.
- b. Must be sent by post. Delivery in person is not accepted. Applications which cannot be reached by the designated date will not be acceptable.
- c. Applications which cannot be reached by the designated date will not be acceptable. (the date printed on the postmark is not accountable.)
- * If you would like to apply from overseas, please make sure to entrust your application procedure to the proxy residing in Japan. Application by post directly from overseas will not be accepted. Notifications from NCU will be sent to your proxy's address.

Once your application documents are accepted, admission card and Test center information will be posted to applicants before First exam; July 31st (Thu) and Second exam: December 17 (Wed). If you did not receive by those dates, please contact Administration Office of Graduate School of Medical Sciences (refer to page1).

5. Application documents, etc.

*For candidates residing overseas, please be sure to apply by post through a proxy residing in Japan, as the online applications are not accepted. Form M1 is not uploaded online, and the application form must be ordered and completed in the candidate's own handwriting (or by a proxy). Notification of examination result and information on enrollment procedures will also be sent by the university to the proxy.

D	ocuments, etc.	Description
1	Application for admission/ Photo Identification card/ Examination Admission card	 [Use the prescribed form of "D-1"] Stick your photograph on the application form. A photograph should be taken within 3 months, full-faced, upper body, no caps or hats, no background, full-color and sized 4cmx3cm. Please fill in the address which you are (or a proxy is) certain to be contacted.
2	Resumé	 [Use the prescribed form of "D-2"] Fill in your school education history from elementary education (elementary school). Provide details of your academic background including Japanese-language school, and other special training school, and of employment history, if any.
3	Academic transcript	 Academic transcript should be prepared by university you are currently enrolled in or have graduated from. If you graduated (or are expected to graduate) from the Medical School of NCU, it is not necessary to submit. If you submit an application under Category (2), (3),(5), (6)d or (7) of "2. Eligibility of applicants," and you have completed a 16-year program in school education in a foreign country, submit one of higher education (equivalent to university) completed in a foreign country. A photocopy will not be acceptable (*Note 2). These documents must be written in Japanese or English, or the translated document in either of these languages should be attached. In this case, however, prepare the translation documents separated from the original transcript.
4	Diploma (graduation letter)	 Your diploma should be prepared by the university where you are enrolled or have graduated. If you graduated (or are expected to graduate) from the Medical School of

		 NCU, it is not necessary to submit the diploma. If you submit an application under Category (2), (3),(5), (6)d or (7) of "2. Eligibility of applicants," and you have completed a 16-year program in school education in a foreign country, submit your diploma of higher education (equivalent to university) completed in a foreign country. A photocopy will not be acceptable (*Note 2). These documents must be written in Japanese or English, or the translated document in either of these languages should be attached. In this case, however, prepare the translation documents separated from the original transcript.
5	Letter of permission for taking examination	[Use the prescribed form of "D-4"] If you plan to work at any place other than NCU after enrollment, submit the letter issued by your supervisor at your place of work.
6	Residence certificate	 If you are a foreign national and eligible for residence in Japan, residence certificate is required to submit. If your visa status is for short-term residence, submit a photocopy of the Japan entry visa stamped on your passport. If you are residing in a foreign country, submit a photocopy of your passport. *Residence certificate without the "Social Security and Tax Number System" is accepted. If the number is printed on the certificate, please make sure to make it invisible by using a permanent black pen.
7	Examination fee (30,410 yen)	 [Paying the examination fees in Japan] When paying the examination fees, fill in the transfer request form (prescribed form of NCU) with the required information, and present it with 30,410 yen (30,000yen for Examination fee + 410 yen for Express mail fee for the admission card to be sent) at bank, etc. for transfer. (<i>Yucho</i> Bank does not accept this transfer. Do not use an ATM, etc.; use only a teller service.) The relevant bank fees are to be paid by the applicant. Submit the "Examination Fee Payment Certificate (Slip B)" received from the bank, etc. together with the other application documents. (Do not submit the "Receipt of Transfer Amount (and Transfer Fee) (Slip A)," which should be retained by you.) The examination fee is not normally refundable in principle. However, under a few circumstances, the paid examination fee may be refunded. Confirm this on the NCU website. ex.) The examination fee was transferred twice. ex.) The application documents were not submitted after the examination fees have been transferred (or the application was not accepted). [Paying the examination fee form overseas] Transfer application fees of 30,410 yen (30,000yen for Examination fee+410 yen for Express mail fee for the admission card to be sent) to the following accounts by July 18 (Fri) 2025 for the First exam and by December 4 (Thu) 2025 and submit a copy of the foreign remittance request form. Type of Transfer: Electronic Transfer Bank Transfer Fees: Paid by the remitter Amount of Transfer: 30,410 yen (JPY) + all fees associated with the transfer 1) The remitter should pay "Japanese bank fees," "remitter's bank fees," and all fees associated with the transfer. 2) If you transfer morey in foreign currency, your application will not be
		accepted. Purpose of Transfer: Application fees

		[Application Fields]
		Bank Name: The Bank of Mitsubishi UFJ, LTD
		Bank Branch: Takiko Branch
		Account Number: 1232518
		Beneficiary Name: Nagoya City University
		Address: 1 Kawasumi, Mizuho-cho, Mizuho-ku, Nagoya, Aichi 467-8601
		JAPAN
		Currency: JPY
		Swift Code: BOTKJPJT
		[Use the prescribed form of NCU]
8	Mailing label	The mailing label will be used to announce the examination result to the
	_	applicants.
0	NCU Address	Filled in the details on the designated address label and stick it onto A4sized
9	label	envelop to be sent to the Entrance Examination and Public Relations Division.

Note1: If you have already submitted the documents required for application at the screening of qualification for examination, it is not necessary to submit them again when applying for the exam.

- Note2: If any of your "Diploma," "Academic Transcript" and other certificates issued by a higher educational institution in a foreign country cannot be reissued, a photocopy is acceptable. If a photocopy is submitted, the original certificates must be presented at the administration office, Entrance Examination Division when you come for the admission procedure.
- Note 3: If the name written on your "Academic Transcript", "Diploma" or other certificates is different from your current name, provide the document prove that your name has been changed (e.g., family register).

Note 4: D-2 and D-4 forms can be downloaded from the following website.

URL: https://www.nagoya-cu.ac.jp/english/faculty/admissions/med/index.html

6. Prior consultation with the applicants with disability

Applicants who need special assistance for their disability during the examination or to complete their graduate studies should contact to the administrator, Office of Medical School, NCU by e-mail (refer to page 1).

Examination date	Examination time	Examination subject	Examination place
[1 st examination] August 5 (Tue), 2025 [2 nd examination] January 14 (Wed), 2026	13:00-15:00 15:30-17:00	Medical Science and Biological Science (Written test) Question will be written in English or Japanese (to be selected by applicant when submitted application) English (Written test) Question will be written in English or Japanese (to be selected by applicant when submitting application) Dictionaries may be permitted except electronic one	Lecture Room A, 11th floor, Medical School Research Building Lecture Room A, 11th floor, Medical School Research Building
	17:30-	Specialized subject (Interview) The applicant's specialized subject (See "Research Contents Classified by Special Fields of Study")	Room in the faculty of the specialized subject

7. Date and method of selection for admission

Note: Examinees should meet at the examination place (Lecture Room A on the 11th floor of Medical School Research Building) 15 minutes prior to the start time of each examination.

8. Results of examination

First exam: September 2 (Tue), 2025 at 14:00

Second exam: February 9 (Mon), 2026 at 14:00

The results of the examination will be announced on the bulletin board on the 1st floor of the Medical School Research Building of NCU, and also posted to each applicant. (Please contact Administration Office

of Graduate School of Medical Sciences (refer to page 1), if the result won't be delivered even one week after the announcement day.)

9. Admission procedure

(1) Expected date of procedure

First exam: Mid-September, 2025

Second exam: Early March, 2026

Details schedule will be noticed at the announcement of examination results.

(2) Details of procedure

The details of the procedure will be notified to you together with the results of the examination. (3) Fees payable during the admission procedure

a. Admission fee	Nagoya City residents, etc.	232,000 yen
	Others	332,000 yen
b. Disaster and accid	3,300 yen	
c. Additional coverage for the prevention of contact infection 70 yen		
d. Insurance for accidents involving third parties or their property 2,000 ye		

Note 1: The admission fee should be paid through a financial institution before commencing the admission procedure. Paid admission fee is not refundable.

- Note 2: "Nagoya City residents, etc." means 'enrolled students' or 'those whose spouse or first-degree family member can prove that his/her continuous residential period in Nagoya city is at least one year before the date of admission by his/her resident certificate'.
- Note 3: Amount of the above tuition fee is example of year 2025. Any revisions to the fees upon admission shall become effective immediately.

10. Tuition

Annual amount 535,800 yen (267,900 yen per semester for 1st and 2nd semesters)

- Note 1: After admission, tuition is to be paid twice a year (for the 1st semester and the 2nd semester) (automatic withdrawal from your account).
- Note 2: Amount of the above tuition fee is example of year 2025. Any revisions to the tuition during enrollment shall become effective immediately.

Note 3: Graduate School of Medical Sciences may charge additional cost without any advance notification.

11. Immigration clearance

If the legitimate immigration clearance fails to be completed by the time limit for admission, the admission may be revoked. For details of admission, contact the following for confirmation:

Immigration Information Center [(Nagoya)]

5-18, Shoho-cho, Minato-ku, Nagoya, Aichi 455-8601 Tel: +81-52-559-2151

12. A waivers of tuition

Students who can hardly afford the tuition fees with financial reasons and who are recognized to be achieving excellent results in their academic work can apply for a waiver of either full, half, or a quarter of their tuition fees.

13. Scholarship system

(1) JASSO

Scholarships of the Japanese Student Services Organization (JASSO) are available to graduate students. Students wishing to apply to the programs will be referred following a review of academic achievement, research ability, etc., to determine eligibility.

(2) Nagoya Kyoso Kenkyu Kikin Scholarship (University's Own Scholarship)

There are income restrictions (less than 1.8 million yen per year) and other screening requirements. 250,000 yen per semester (maximum 500,000 yen per year) per student.

14. Cautions

- (1) Applications lacking necessary documents will not be accepted.
- (2) Applications found to have made false statements in their applications may have their admission revoked even after their enrollment.
- (3) Application documents, etc. will not be returned.
- (4) If your return address has been changed, notify it immediately to the administrator, Office of Medical School, NCU by e-mail (refer to page 1).
- (5) A double enrollment is prohibited under the rule.

15. Cooperative graduate school system

Cooperative graduate school system is a method of providing graduate education by utilizing facilities, equipment and human resources of national, public or private off-campus research institutions acknowledged as a high research standard. The Graduate School of Medical Sciences of NCU has cooperative agreements with the National Cancer Center, the National Institute of Infectious Diseases, and the National Center for Global Health and Medicine.

Notifications from NCU in case of emergency

In case of emergency (e.g., occurrence of disaster) or if changes are required to the contents of this application guidebook, students will be notified those changes through the website of NCU. Particularly as the examination day draws near, pay close attention to the website of NCU.

Applicants may also be directly contacted. In your application documents, therefore, be sure to provide contact details where you can always be reached.

NCU Website https://www.nagoya-cu.ac.jp/

Treatment of your personal information

NCU treats your personal information in accordance with the Act on the Protection of Personal Information of Nagoya City.

- (1) Use of your personal information
 - a. Your name, address and other personal information given in application documents, etc. are used for our operations of selection for admission (e.g., application registration, selection, application result announcement, admission procedure).
 - b. Your personal information used for selection for admission (e.g., academic transcript) may be used as reference material for investigative research and academic research to improve future selection for admission and graduate education. (Investigative research results are announced in such a way that individuals cannot be identified.)
 - c. After you are admitted, your personal information is used for operations related to educational affairs (e.g., enrollment management, schooling guidance), student support (e.g., health control, tuition waiver, application for scholarship, job placement support), and tuition collection.
- (2) Entrustment of operations to external business operators The operations of (1) above may be entrusted to some external business operators under an agreement with them for proper treatment of personal information.

Smoke free campus

NCU hold the smoke free policy on campus. All students are required to follow this policy, and asked to further cooperate to avoid smoking on roads and around university campuses.

Major	Specialized field of study	Desearch contents
Wiajoi	Faculty member in charge	
	Integrative Anatomy	(1) Neuroscience research to reveal the mechanism underlying the regulation of brain function and pathology of neurological and psychiatric disoreders by modulating neuron-glia interaction and metabolic system.
	Prof.Takatoshi Ueki	(2) Research to develop the advanced rehabilitation technology based on newly identified therapeutic targets and diagnostic markers in the studies of animal models and patients of several kinds of brain dysfunctions.
	Anatomy and Neuroscience	Conducting seamless research into both sensory organs and the brain (1) Identification of auditory/gustatory recipience; and functional analysis using genetically-modified animals
	Prof. Shinya Ugawa	(2) Morphological / molecular biological / physiological research into the new nerves of adult brain hippocampus
	Molecular Oncology	We leverage proteomics-driven multi-omics analysis to decode the molecular mechanisms of cancer and drive innovation in diagnostics and therapeutics.
	Prof. Ayumu Taguchi	 (1) Development of eating edge procedures and proceedings (2) Development and translation of blood-based biomarkers for early detection and precision oncology (3) Integrated molecular profiling for the discovery and clinical application of novel therapeutics
	Cell Biology	Cilia are antenna-like organelles which are outgrowths of the plasma membrane of eukaryoitc cells. They are known to be related to a wide rage of diseases. We focus on the following subjects; (1) Elucidating
	Prof. Yoichi Kato	the mechanism of ciliogenesis (2) Understanding the regulatory mechanism of signal pathways by cilia (3) Dissecting the pathogenesis of ciliopathies (4) Discovering the roles of cilia in various diseases
	Cell Physiology	Investigations into the functional and morphological characteristics of smooth muscle cells and their neighbouring cells. (1) Generation and propagation of spontaneous activity in smooth muscle. (2) Neurohumoral regulation of smooth muscle function.
	Prof. Hikaru Hashitani	 (2) real on an regulation of shields in a set function. (3) Intrinsic properties of microvasculature in visceral organs. Major techniques employed: electrophysiology, intracellular calcium imaging and fluorescent immunohistochemistry.
Structure and	Neurophysiology and Brain Science	Neuroscience & neurophysiological techniques are used to know physiological brain function through three projects with pathophysiological analyses. 1) the mechanism of forelimb function recovery after intracerebral hemorrhage by rehabilitation 2) the mechanism of function recovery by stem cell (ES / iPS
Function in Biomedical	Prof. Hideki Hida	cell) transplantation in a model of neonatal white matter injury 3) the mechanism in the formation of emotion by gut-brain interaction that is activated by umami ingestion
Sciences	Gastroenterological Surgery	Analysis of mechanisms of tumorigenesis, invasiveness, metastasis, and angiogenesis in digestive organ. Inflammation and cancer. Nutrition, Immunity and Inflammation. Development of techniques in
	Prof. Shuji Takiguchi	laparoscopic surgery. Surgical Infection.
	Thoracic and Pediatric Surgery	Research on the surgical and molecular target therapy for thoracic malignant tumors including lung cancer and thymic epithelial tumors. Especially focused on the clinical and scientific usefulness of
	Prof. Katsuhiro Okuda	minimally invasive surgery for thoracic malignancies.
	Nephro-urology	Molecular biology for urolithiasis, endoscopic urology, prostate cancer and bone metastasis, thermotherapy for urological cancer, male infertility and reproductive urology, space urology, technological development for urological surgery, bimolecular science for urology, pediatric urology,
	Prof. Takahiro Yasui	genetic therapy, development for voiding function, epigenetic mechanism for urological disease, congenital urological basic research, Robotics, VR technology.
	Cardiovascular Surgery	
	(TBA)	
	Breast Surgery	1. Research on molecular mechanisms of hormone dependent growth in breast cancer, 2. Research on predictive factors of endocrine therapy in breast cancer, 3. Research on "triple negative" breast cancer,
	Prof. Tatsuya Toyama	4. Research on prognostic factors in breast cancer.
	Pediatric urology	
	(TBA)	Desig researches to alugidate pathogenesis of vitreoretinal diseases, clinical reaserches for diagnosis and
	Ophthalmology and Visual Science	therapy by multi-modal imaging, and researches on artificial intelligence (AI) (1) Pathogenesis of age-related macular degeneration (lipid metabolism and roles of macrophages and mast cells)
	Prof. Tsutomu Yasukawa	 (2) Ocular drug delivery system (DDS) (intraocular sustaind release of drug) (3) Regenerative medicine by use of a cell sheet (4) Multi-modal imaging to elucidate pathogenesis of retinal vein occlusion (5) Focal laser phogocoagulation by navigation system to treat diabetic macular edema (6) AI-assisted imaging devices and data science in the field of Ophthalmology

Major	Specialized field of study	Research contents
	Faculty member in charge	Research contents
	Otolaryngology, Head and Neck Surgery	1. Comprehensive elucidation of the pathophysiology of acute cochlear-vestibular disorders caused by viral infection. 2. Elucidation of the mechanisms underlying the progression of bilateral vestibulopathy based on brain functional analysis. 3. Elucidation of the molecular mechanisms of facial nerve palsy using animal models of virus-induced facial nerve paralysis. 4. Development of novel vestibular
	Prof. Shinichi Iwasaki	rehabilitation methods using noisy galvanic vestibular stimulation for the vestibular disorders. 5. Investigation of the immune mechanisms of head and neck cancer and development of new treatments using oncolytic virus 6 Investigation of the mechanism of spasmodic dysphonia and development of new methods of thyroplasty
Structure and Function in	Geriatric and Environmental Dermatology	Mechanism analysis and development of phototherapy for refractory skin diseases Development of treatment using dendritic cells for allergic, autoinflammatory and malignant diseases
Biomedical	Prof. Akimichi Morita	Environmental factors and skin aging Peripheral immune tolerance and cutaneous immune regulation
Sciences	Oral and Maxillofacial Surgery	 Basic and clinical study on jaw bone regeneration. Basic and clinical study on treatment for oral precancer lesion. Development of new dental implant therapy.
	Prof.Yasuyuki Shibuya	 Basic and clinical study on jaw bone reconstruction and oral rehabilitation. Clinical study on oral care.
	Plastic and reconstructive surgery	Management of impaired wound healing, soft tissue reconstruction by adipocyte-derived stem cells,
	Prof. Kazuhiro Toriyama	lymphedema and lymphatic regeneration
	Experimental Pathology and Tumor Biology	Research Description: We principally employ cell culture and genetically engineered rat models to understand the molecular characteristics of prostate cancers, and to explore their potential as chemopreventive targets. Alternatively, the following themes are studied in subgroups. •Clinicopathological analysis for development and progression of prostate, breast, and female
	Prof. Satoru Takahashi	 gynecologic tumor The potential of a gap junctional protein in experimental and human hepatocarcinogenesis Discovery of modifying effects against carcinogenesis and their molecular mechanisms by natural products and compounds including health food products
	Pathology and Molecular Diagnostics	
	(TBA)	
	Pharmacology	 Pathophysiological roles of ion channels in inflammatory diseases Role of ion channels in cancer and immunosuppressive cells under tumor microenvironment (cancer therapy resistance, cancer stemness, and recruitment of immunosuppressive cells by chemokines)
	Prof. Susumu Ohya	 Regulation of ion channels and their regulators in osteoblast differentiation and bone-related diseases Molecular mechanisms of mechanotransduction in cardiac physiology and pathology
	Bacteriology	Pathogenesis of virulent bacteria, such as group A streptococcus (Streptococcus pyogenes),
Biosignaling and Regulation in	Prof. Tadao Hasegawa	Analysis of the function and the expression of virulence-associated proteins of bacteria, Development of novel strategies for the treatment of severe bacterial infectious diseases.
Medical Sciences	Immunology	Investigating immune regulation by dendritic cells and regulatory T cells and further exploring the new
	Prof.Sayuri Yamazaki	strategies for treatment of various diseases
	Virology	 Comprehensive genetic analysis of Epstein-Barr virus (EBV)-associated diseases Comprehensive genetic analysis of rare cancers and inherited diseases
	Prof. Yusuke Okuno	 Genetic diagnosis of patients with undiagnosed diseases Comprehensive detection of pathogens using next-generation sequencing
	Comparative and Experimental Medicine	We are are working on the following subjects through the generating genome-editing animals and the phenotypic analysess; (1) The effect of membranous proteins recycling pathway on the early
	Prof. Hisashi Oishi	development of mammals, (2) Improvement of pregnancy rate by homeostatic and epigenetic analyses of reproductive aging.
	Orthopaedic Surgery	1) Mechanism of hypertrophic change of flavum in lumbar spinal stenosis. 2) Radio-hyperthermo- chemotherapy for malignant soft tissue tumors. 3) Pathophysiology of hip joint disorder in childhood. 4) Regeneration of peripheral nerve using artificial nerve. 5) Biomechanical study of ACL injured knee and ACL reconstructed knee. 6) Mechanism of pathogenesis in rheumatoid arthritis. 7) Effectiveness of drug
	Prof. Hideki Murakami	treatment and operative therapy in rheumatoid arthritis. 8) Basic and clinical research for throwing- related shoulder and elbow injuries. 9) Regenerative medicine for post-traumatic bone and cartilage defect. 10) Molecular research of pathogenesis and therapeutics in ischemic of osteonecrosis.

Major	Specialized field of study	Passarch contants
WIAJOI	Faculty member in charge	Research contents
	Rehabilitation Medicine	① The evaluation of motor and cognitive function using non-invasive methods and creating new neurorehabilitation based on the personalized functional disability ②Creating a novel personalized rehabilitation system after total hip arthroplasty using wearable cyborg ③ Creating new gait
	Prof. Yoshino Ueki	rehabilitation in parkinsonian syndrom using closed loop stimulation (4) prediction and adjust the appropriate rehabilitation (5) A Nationwide Survey on the current state of rehabilitation of neurodegenerative disorders
	Psychiatry and Cognitive- Behavioral Medicine	Development of novel treatment using cognitive behavioral therapy, interpersonal therapy, and digital technology for mood disorders, anxiety disorders, post-traumatic stress disorder, eating disorders, and cancer patients. Research on family intervention and family psychoeducation for mood disorders and schizophrenia. Development of intervention for developmental disabilities, truant children, and their
	Prof. Tatsuo Akechi	families. Research on treatment optimization for refractory depression (mECT, TMS, etc.). Research in the areas of consultation liaison psychiatry including perinatal care, psycho-oncology, palliative medicine, epileptology, student mental health, and community mental health s also being conducted.
D iosignaling and	Psycho-oncology	Supprtive, Palliative and Psychosocial intervention for cancer patients with patient-public involvement; Survivorship care planning; Advance care planning; Communication; Collaborative care programs; Psycho-pediatric, AYA generation and geriatric oncology; Family and bereaved family support for
Regulation in Medical	Prof. Maiko Fujimori (Cooperative graduate school)	patients with cancer; Education for oncology staff, Implementation Science of digital mental health, Cancer control research with Big data science.
Sciences	Neurosurgery	Surgery of ischemic cerebrovascular disorder; molecular mechanism of brain lesion repair; molecular biological study of the pathological condition of subarachnoid hemorrhage, hydrencephalus and increase in intracranial pressure; development of a new method for basilar surgery, stereoencephalotomy and cerebrovascular surgery; development of a surgical treatment method for Parkinson's disease;
	Prof. Mitsuhito Mase	pathological analysis and development of treatment for diffuse brain injury; development of neural function recovery by means of stem cell transfusion; development of operation assisting imaging technology; development and introduction of a new functional brain surgery
	Obstetrics and Gynecology	Recurrent pregnancy loss, preimplantation genetic diagnosis; prenatal diagnosis and fetal therapy; assisted reproduction technology; genital tumor development mechanism; genetic counselling; Birth
	Prof. Mayumi Sugiura	cohort of the Japan Environment and Children's study.
	Pediatrics and Neonatology	Pathogenesis and treatment of neonatal brain injury, diagnosis and treatment of pediatric endocrinological disorders, Comprehensive management of congenital heart diseases, diagnosis and treatment of pediatric malignancy, pathogenesis of pediatric liver diseases, pathogenesis of pediatric
	Prof. Shinji Saitoh	neurological disorders, genomic medicine in pediatrics, pediatric application of regenerative medicine, evaluation and management of developmental disabilities.
	Neurocognitive Science	Our final goal is to elucidate molecular mechanisms underlying pathogenesis of neurocognitive disorders, particularly Alzheimer's disease (AD) and related disorders, and to develop preventive or therapeutic strategies for the disease. (1) elucidation of the role of chronic neuroinflammation (neuro-glial
	Prof. Takashi Saito	interaction) associating disease development (2) understanding of the brain-peripheral interaction for pathogenesis of AD (3) understanding of the disease-disease interaction for acceleration of AD pathogenesis.
	Neuro-Oncology	Our research aims to elucidate the mechanisms underlying the initiation and progression of brain tumors in both children and adults, and to identify new therapeutic target molecules based on these findings. We are particularly focused on developing spontaneously occurring brain tumor mouse models that recapitulate human disease, and are working to uncover new cancer signals from a unique perspective
Biodefense System and Comprehensive Medical Sciences	Prof. Daisuke Kawauchi	that integrates developmental neurobiology, tumor biology, and bioinformatics approaches. Additionally, through pharmacological experiments using models with transplanted tumors from human patients, we are advancing research that bridges basic and clinical studies, in collaboration with domestic and international partners.
	Neurodevelopmental Disorder Genetics	It has been revealed that genetic backgraound largely contributes to the pathogenesis of developmental disorders, and many responsible genes have been identified. Our group has been studying molecular genetics of neurodevelopmental disorders, intellectural disabilities and enilensy by identification of
	Prof. Kazuhiro Yamakawa	responsible genes and .analyses of model mice. We are now trying to develop therapeutic approaches including gene therapies.
	Neurotoxicology	(1) Risk assessment of nano-sized materials in the central nervous system and lung tissue, focusing on the toxicogenomics (cell culture system and animal experiments) and underlying mechanisms (cytokines and cancer-related genes); (2) Drug discovery of new antitumor agents aiming at toxicity mitigation, in silico analysis of a target molecule, QSAR analysis, mechanism of action (transcription factor and
	Prof. Masumi Suzui	angiogenesis); (3) Studies on the intercellular interactions via exosomes; (4) Functional analysis of the intracerebral signal peptide: (5) Development of an animal model that is highly sensitive to carcinogenesis by using transgenic technology, evaluation of extrapolative efficacy of the animal model to humans, development of a diagnostic biomarker of cancer
	Developmental and Regenerative Neurobiology	Our lab is interested in new neurons generated by neural stem cells in the adult brain. We are studying the mechanisms for neuronal migration, maturation and survival in the physiological and pathological

Major Specialized field of study Faculty member in charge	Research contents	
	Faculty member in charge	Research contents
	Prof. Kazunobu Sawamoto	conditions using a variety of in vitro and in vivo systems. We are also developing technologies to promote migration and regeneration of brain cells.

Major	Specialized field of study	Desearch contants
wiajoi	Faculty member in charge	Research contents
	Cognitive Function and Pathology *Endowed course Prof. Hiroshi Nomura	 Elucidation of neural mechanisms of learning and memory and emotion. Analysis of neural networks by measurement and manipulation of neural activity in vivo and selective visualization of neural circuits. Elucidation of the pathophysiology of neurological and psychiatric disorders related to disruption of memory and emotion. Development of novel therapeutic and preventive methods for these disorders.
	Gastroenterology and Metabolism	1. Exploration of novel markers of diagnosis and treatment efficacy for digestive organ cancer, 2. Development of diagnostic method and treatment using photodynamics for gastrointestinal cancer, 3. Development of novel treatment for inflammatory bowel disease, 4. Development of novel diagnostic method and treatment for IgG4-related disease and autoimmune pancreatitis, 5. Development of treatment using metallic start for melionent stensis of hilingy and costrointestinal treat and
	Prof. Hiromi Kataoka	multidisciplinary opinion including dynamic standpoint, 6. Development of treatment for non-alcoholic steatohepatitis, 7. Development of treatment for the prevention of hepatocarcinogenesis, 8. Viral and human genomic analysis in viral hepatitis, 9. Investigation of pathogenesis and exploration of novel target molecules of treatment for diabetes mellitus, dyslipidemia, obesity and endocrine disease
	Respiratory Medicine, Allergy and Clinical Immunology (TBA)	
	Cardiology	 Research on the development of personalized diagnostic and therapeutic strategies for heart failure Development of advanced echocardiographic and imaging techniques for circulatory function Pathophysiological insights and therapeutic optimisation for structural heart disease Concentry microarregulation as a target for pour part of understanding of insights heart
	Prof. Yoshihiro Seo	disease5. Impact of lifestyle and environmental factors in the prevention and management of hypertension
	Nephrology	 Complications of chronic kidney disease, especially renal anemia and mineral bone disorders Research on diabetic kidney disease and congestive kidney focusing on the kidney size
	Prof. Takayuki Hamano	 Research on acute kidney injury Research on pathophysiology of cardiorenal syndrome
	Neurology	 Clinical Neurology, espasially neurogenerative disease including Parkinson disease, Parkison-related disease, Alzheimer's disease, Lewy body dementia, Frontal tenporal lobe demantia. Development of radiological diagnostic biomarker for neurogenerative disease
Biodefense System and Comprehensive	Prof. Noriyuki Matsukawa	 Analysis for Alzheimer's pathogenesis from the perspective of hippocampal cholinergic neurstimulating peptide (HCNP) Development of therapeutic agent for Alzheimer's disease by using new model mice
Medical Sciences	Hematology & Oncology	1. Dissection of molecular pathogenesis of hematopoietic neoplasms, identification of novel molecular targets, exploration of biomarkers predicting for the efficacy and adverse events of molecular targeting therapies, and mechanisms responsible for the drug resistance
	Prof. Shinsuke Iida	 Development of novel immune therapies against cancer with therapeutic antibodies or chimeric antigen receptor T-cell (CAR-T) therapies Planning and conducting preclinical studies and clinical trials against cancer
	Anesthesiology and Intensive Care Medicine	 Elucidation of the mechanisms of neurocognitive dysfunction in the perioperative period Elucidation of the pathogenesis of central nervous system disorders caused by sepsis and development of treatment methods, Elucidation of the pathogenesis of chronic pain and development of treatment methods
	Prof. Kazuya Sobue	4. Elucidation of the mechanisms of chronic pain in the oral region and development of treatment methods5. Basic research on nutritional management for critically ill patients6. Clinical research in the areas of anesthesia and intensive care
	Radiology	1. Research on advanced imaging modalities, 2. Development of new radiology service with artificial intelligence, 3. Creation of new treatment in interventional radiology, 4. Optimization and
	Prof. Akio Hiwatashi	standardization of radiation treatment including proton beam therapy, 5. Clarification of the effect of radiation with biology
	General Medicine & General Internal Medicine	Quantitative and qualitative research on the following topics. 1.Training of general practitioners/internal medicine physicians (curriculum development, video review, interdisciplinary collaboration, etc.) 2.Promotion of ACP (Advance Care Planning) 3.The usefulness of medical interviews (training of standardized patients, etc.) 4 SPH (Social Determinants of Health) (COVID 19, medical access for
	Prof. Kei Miyazaki	foreign residents in Japan, etc.) 5.Development of a new concept of health (positive health) 6.National survey, diagnosis, and development of treatment methods for rare diseases (SCLS etc) 7.Community-based participatory research utilizing community health care centers (such as frailty prevention)
	Clinical Pharmaceutics	 Analysis of risk factor of side effect on chemotherapy. Efficacy evaluation of new therapeutic drug monitoring software of antibacterial agents. Analysis of the relationship between urinary / kidney diseases and drugs and development of new treatments.
	Prof. Yoko Hibi	4. Analysis of the relationship between delirium and kidney diseases.5. Clinical research based on drug treatment issues, etc.

	Advancing Acute Medicine	(Prof. Hiroshi Sasano) Breathing-circulation cooperation (heart rate, blood flow variability analysis, physiology of respiratory sinus arrhythmia), the development of clinical devices (ultrasound-guided
	Prof. Hiroshi Sasano	education. (Prof. Tomonori Hattori) Venous blood gas and lactate studies, Research on sepsis pathology and
Biodefense System and	Prof. Tomonori Hattori	endothelial-derived hyperpolarizing factor (EDHF), Research on frailty and emergency medicine, Research on lung damage caused by COVID-19, Research on Long COVID-19
Comprehensive Medical	Emergency and Critical Care	Clinical study of sepsis and infection control. Clinical study of trauma and critical care.
Sciences	Prof. Asako Matsushima	Study of disaster reduction and medicine Stusy of helthcare art at emergency room
	Infectious Diseases	1. Antimicrobial stewardship program in hospitals and communities 2. Impact of infectious disease consultation on patient outcomes 3. COVID-19 in immunocompromised patients 4. Clinical research of
	Prof. Naoya Itoh	drug-resistant bacteria 5. Epidemiology of infectious diseases in post-travel patients
	Occupational and	
	Environmental Health	exposure characterization), (2) Epidemiologic study on children's environmental health
	Prof. Michihiro Kamijima	
	Public Health	The department specializes in epidemiology. The target outcome includes lifestyle-related diseases such as cancer, diabetes mellitus, and metabolic syndrome, QOL, health status, and death. Using a statistical approach, we discuss the relationship between these outcome and genetic and/or environmental factors
	Prof. Sadao Suzuki	such as life styles, psychosocial factors, and genetic polymorphism including the interaction. We also work on evaluation and comparison of diagnostic tests, clinical epidemiology and descriptive epidemiology of intractable diseases.
Community Medicine,	Forensic Medicine	Ophthalmological findings in abused children. Biochemical analysis of post-mortem blood samples Determination of causes of death through analysis of extracellular vesicles in the body. Toxicological mechanisms of drugs and poisons in human cells Human genetic studies using mitochondrial DNA
Health Sciences and Medical	Prof. Toru Oshima	Molecular evolutionary studies of human viral pathogens and their forensic applications. Forensic mycology Diagnostic forensic imaging
Education	Medical Education	Development of medical and healthcare education systems among multiple medical institutes. Development of effective faculty developments for clinicians. Development and assessment for new
	Prof. Osamu Takakuwa	interprofessional education system.
	Medical Innovation	
	(TBA)	
	Biostatistics and Health Data Science	Development of new statistical methods in the medical field, research on biostatistical methodologies, data science research as an applied field of statistics (e.g. data management, data collection design,
	Prof. Kenichi Yoshimura	statistical analysis, interpretation, and communication methodologies), and research on methodologie related to planning and conducting clinical research and trials as an applied field of biostatistics.
